

Alejandro Galina Mata

Frontend Engineer | Angular | AI & Automation Solutions

Mexico City, Mexico • alejandrogalinamata@gmail.com • +52 5570062689 • [LinkedIn](#)

PROFESSIONAL SUMMARY

Frontend Developer with 6+ years of experience specializing in Angular and building scalable, high-performance web applications at Globant for US-based clients. Proven impact improving application performance (30% reduction in initial load time) through lazy loading and bundle optimization.

Strong experience in modular frontend architecture, reusable component systems, and cross-team collaboration in Agile environments. Expanded skillset into automation and AI-driven solutions using n8n, integrating APIs, LLMs, and business workflows (customer support, scheduling, notifications, and document generation).

Advanced English for daily communication with distributed teams.

Experienced in designing end-to-end automation solutions combining frontend applications with AI-driven workflows.

PROFESSIONAL EXPERIENCE

Globant | Web UI Developer — Angular / React

Aug 2021 – Present • Mexico City, Mexico (Remote)

- Reduced initial load time by 30% through lazy loading strategies and bundle optimization, improving user experience across production applications.

- Worked on enterprise-level applications for a major US-based media and entertainment client (Disney), developing solutions adopted across multiple internal teams and supporting high-traffic production environments
- Designed and implemented a modular Angular architecture improving scalability and maintainability across multiple application modules.
- Angular migrations (v12 → v15 → v18), improving performance, dependency management, and long-term maintainability
- Built a reusable component library adopted across 3+ projects, increasing development speed and UI consistency.
- Improved UI accessibility following WCAG standards, implementing semantic HTML, ARIA attributes, and keyboard navigation support across enterprise applications
- Developed Web Components using Stencil, enabling cross-framework compatibility (Angular / React)
- Developed frontend solutions using React for Backstage IDP, building custom plugins and UI components for internal developer platforms.
- Integrated frontend components with backend services in Backstage, improving developer experience and internal tooling usability.
- Wrote and maintained unit tests using Jasmine, ensuring code reliability and reducing regression bugs.
- Worked with CI/CD pipelines using Jenkins and Harness (basic level) to support deployment workflows and release processes.
- Collaborated in Agile/Scrum teams using Jira for sprint planning, backlog management, and issue tracking.
- Collaborated with backend teams to improve API efficiency and reduce response times.
- Participated in technical architecture discussions, contributing to decisions on frontend structure and maintainability.
- Developed and consumed REST APIs using Node.js, collaborating with backend teams to improve data flow and performance
- Created and optimized SQL queries and stored procedures for efficient data access

Oct 2020 – Aug 2021 • Mexico City, Mexico

- Managed client requirements and defined development strategies aligned with project timelines.
- Restructured database design improving data organization and query efficiency.
- Developed stored procedures, views, and functions to support API operations.
- Implemented web scraping solutions to collect and process data for pharmacy management.
- Built frontend modules for product display, filtering, and product management.

DGESU (Government Project) | Web Developer

2019 – 2020 • Mexico

- Developed web modules supporting government transparency processes for resource reporting.
- Built UI components for uploading and managing official documentation.
- Designed relational databases and created optimized SQL queries for data retrieval and reporting.
- Contributed to internal compliance tools aligned with transparency regulations.

AUTOMATION & AI PROJECTS

- Designed multi-step automation workflows integrating AI, messaging platforms, and scheduling systems for real-world business operations
- Built AI-powered customer support workflows reducing manual response time and automating client interactions
- Integrated APIs from OpenAI and OpenRouter with fallback strategies to improve reliability
- Developed event-driven workflows for notifications and scheduling
- Built web scraping pipelines for automated data collection
- Implemented document generation workflows (reports, PDFs, operational docs)

TECHNICAL SKILLS

Automation & AI: n8n (workflow design, API integrations, error handling), LLM integrations (OpenAI, OpenRouter with fallback strategies), Webhooks, process automation

Frontend: Angular (Advanced), React, TypeScript, JavaScript (ES6+), HTML5, CSS3, SCSS

Angular Ecosystem: RxJS (switchMap, mergeMap, concatMap, BehaviorSubject), Angular Material, Lazy Loading, OnPush Change Detection

Architecture: Modular architecture, Component-driven design, State management, Clean architecture principles, Frontend system design

Testing: Jasmine, Karma (unit testing in Angular)

CI/CD & DevOps: Jenkins (basic), Harness (basic), Git (GitHub / GitLab)

Tools & Workflow: Jira (Scrum/Agile), Angular CLI, Postman, REST APIs

Additional: Node.js, MySQL / Relational Databases

LANGUAGES

English: Advanced — daily professional communication with US-based teams (meetings, technical discussions, code reviews)

Spanish: Native

EDUCATION

Computer Systems Engineering — *Instituto Politécnico Nacional (IPN), Mexico City*
(Coursework completed, no degree conferred)
